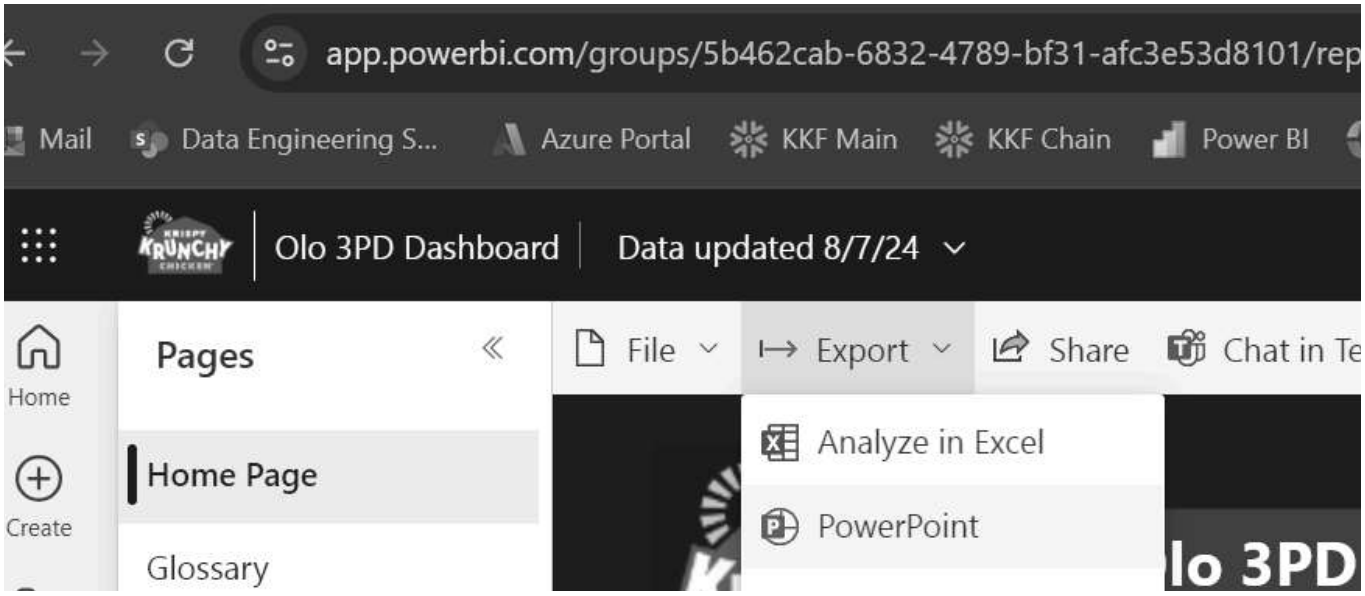
# Connect Power BI to PowerPoint

*** Note: This functionality allows users to directly import multiple Power BI dashboard pages to a Power Point presentation. ***

1. In Power BI browser, open the report you want to import to Power BI.

2. Navigate to the page you want to import and click Export > PowerPoint.



3. You should now see the Export to PowerPoint popup. Choose “Embed live data” from the dropdown. If you'd like to embed the report with pre-selected filters, you may do so by checking the box next to that option, as seen in the screenshot below. Click Copy to copy the page URL.

5. Open your Power Point presentation and navigate to the slide you want to import the PBI page to. Click Insert > Power BI.

6. Paste the PBI report URL in the text box that says "Paste URL from Power BI here" and click Insert.

7. Your slide should now show the desired PBI page.
